

**INITIAL REQUEST** — Filter expenses by date range (default: current month's expenses).

**FOLLOW-UP CONTEXT** — The developer provides the existing controller.

### Initial solution

TURN 1

```
@expenses = Expense.where(  
  datetime: start_date..end_date  
)
```

❶ **User scope:** List only the current user's expenses.

### Earlier elicitation opportunity

- *Should expenses be restricted to the current user?*

### Revised solution

TURN 2

```
if user_signed_in? ❷  
  @expenses = current_user.expenses ❶  
    .where(...).order(...)  
else  
  @expenses = Expense.none ❷  
end
```

❷ **Signed-out behavior:** Show no expenses when signed out.

- *What should be returned when the user is not signed in?*
